How to Complete Assignments for this Class

To complete assignments for this class, log into MyMathLab (www.mymathlab.com) with your username and password. Select our class.

In the menu on the left, click Assignments, then click the dropdown buttons “All Assignments,” “All Chapters,” and “Show All.”

The due dates for all assignments are in the left column beneath “Due.” Since they have been sorted chronologically, work your way from top to bottom.
Study Plan Assignments

Eventually, you will reach a “Study Plan” assignment (indicated by a purple ring). When you click such an assignment, you’ll see a window like this one:

Begin by completing problems in the “Practice” area and/or the “Quiz Me” area.

If you are confident in your skills, start with Quiz Me. If you know your skills need improving, start with Practice. Each Quiz Me consists of up to four problems associated with that learning objective, ranging from easy to hard. If your score on those problems is 75% or higher, you earn a Mastery Point (MP) and that objective moves from the “Objectives to practice and master” category to the “Objectives mastered” category. If your score on those problems is not 75% or higher, the “Quiz Me” option becomes unavailable until you complete at least one Practice problem correctly. (I recommend you choose the problem(s) you got wrong on the Quiz Me.) For a “short” assignment (5 Mastery Points or less), you must earn all available mastery points to move on to the next step. For “long” assignments (6 Mastery Points or more), you can miss one Mastery Point and still move on to the next step.
Quizzes

Once the required number of Mastery Points are earned, you are ready to take a quiz. Click Assignments in the menu on the left side, and then select the Quiz.

You can take the Quiz as many times as you’d like, and the highest score will count.

Remember that a significant portion of your overall grade in this class comes from these quizzes. Therefore, it is important to do your best on every quiz for the entire semester.
